Farm Topics

U. S. '42 Farm Output Planned to Fill Needs

AAA Authorities Say Two Records Broken This Year

Farmers from Maine to California will chalk up two history-making achievements when their 1942 harvest is tallied.

Harvest like this of potatoes on the C. A. Brown farm of Dallas county, Texas, have been planned in advance in order to insure the right amounts of the right products to fill anticipated needs of the U. S. and United Nations.

Not since before World War I when the Amazon basin, despite its primitive production system, was the world's supply center for crude rubber, has there been such activity in the wild country where native still use blowguns and poison-tipped arrows.

These goals have been broken down into goals for states, counties and individual farms for farmers to shoot at.

Goals have been used for years by AAA for basic crops. But this year AAA crops have much more than the 1942 production of approximately 20,000 tons.

The main objective is to give to the United States added stocks of rubber to round out our synthetic program—because rubber experts have found a percentage of natural rubber still must be used with synthetic to give the best performance on certain products, such as heavy-duty tires.

Even if we should realize between 25,000 and 30,000 tons as our share from the trees of the Amazon this year, as some experts believe we will, it will be a drop in the bucket compared with the 600,000 tons as our share from the development of the rubber tree in the Far East.

It is the headquarters of the Rubber Development Corporation, a government agency on which Jeffers has placed responsibility of developing many wild rubber programs outside this country.

The Brazilian government is reconstructing the workers. The RDC, a subsidiary of the Reconstruction Finance Corporation, is footing most of the bills of labor, supplies and material.

In return, the United States has the rights to purchase all rubber obtained from the development of the rubber tree in the Far East.

Another view of the same brown farm showing still more potatoes which will soon be on the way to hungry Yanks, hard working American workers, and Allies throughout the world.

viewed goals call for one-fifth more production than the average of the 1930s and 5 1/2 per cent more than in the record year of 1941.

Fight Wilds for Natural Rubber

Face Huge Task in Amazon Jungles to Gather Precious Juice.

WASHINGTON.—To get precious natural rubber in the cupful-and-even by the tablespoon—for our war needs, men are doing a titanic face lifting job on a jungle-pocked area of the South American continent that is almost as large as the United States.

Roads are being built through trackless forests hitherto trod only by jaguars and nimble natives, and railway lines are inching their way through the wet, torrid country of the Amazon river basin.

Steamers and launches have been sent to the country to speed transportation of supplies and workers up the Amazon. Outboard motors are being used to send native-style canoes chugging up the narrow, winding streams which lace through the jungle.

Not since before World War I when the Amazon basin, despite its primitive production system, was the world's supply center for crude rubber, has there been such activity in the wild country where native still use blowguns and poison-tipped arrows.

These goals have been broken down into goals for states, counties and individual farms for farmers to shoot at.

War Brings Rio Grande Rich Era

Export of \$75,000,000 Canned Vegetables and Fruits Planned.

CHAMBERLAIN, TEXAS.—A war assignment to provide tons of food for the nation has brought the richest agricultural era in its history to the Lower Rio Grande valley of Texas, which competes with California and Florida as a citrus fruit producer.

In the year ending next September, the valley will have sold about \$75,000,000 worth of citrus fruit, vegetables and cotton to civilians and the soldiers of the United States.

Such farming riches are unparalleled in nearly 50 years of crop production along the delta of the Rio Grande, a lush acreage compressed into an area 100 miles long and 40 miles wide. Not once since the railroads first reached this section in 1904 has a year's farm income topped the \$50,000,000 mark.

Not since before World War I when the Amazon basin, despite its primitive production system, was the world's supply center for crude rubber, has there been such activity in the wild country where native still use blowguns and poison-tipped arrows.

These goals have been broken down into goals for states, counties and individual farms for farmers to shoot at.

Iceland Helped By U.S. 'Invasion'

Benefits of Aid Given to the Natives by Yanks One Of Gains of War.

REYKJAVIK, ICELAND.—The gains of war are not the only profits to be reaped from United Nations control of this North Atlantic outpost. Entirely aside from the military advantages of this strategic base on Atlantic travel lanes are the benefits of the help given to Icelandic natives by American troops.

Authorities of the Iceland base command reviewed the record recently, and it makes interesting reading.

Take the veterinary corps, just as an opening example. Army vets have checked bacteria in milk, working in the local dairies and creameries. They have administered TB testing of cattle and have helped to combat Bang's disease.

Not since before World War I when the Amazon basin, despite its primitive production system, was the world's supply center for crude rubber, has there been such activity in the wild country where native still use blowguns and poison-tipped arrows.

These goals have been broken down into goals for states, counties and individual farms for farmers to shoot at.
